Across

3. the part of the water cycle where water vapor in the air gets cold and changes back into liquid, forming clouds.
4. the part of the water cycle where the earth soaks up the water and uses it for the soil, plants, and animals.
8. the part of the water cycle where the sun heats up water in rivers, lakes, or the ocean and turns it into vapor or steam.
9. the part of the flower that is used to protect the flower while it is developing from a bud.

Down

1. the part of the water cycle where clouds get heavy and water falls back to the earth in the form of rain, hail, sleet, or snow.
2. the introduction of harmful substances or products into the environment.
5. the water zone closest to shore.
6. the process by which the surface of the earth is worn away by the action of water, waves, etc.
7. the part of the flower that is used to attract insects.
