

Water Conservation Incentive & Rebate Program

If you would like to save water and money while upgrading your irrigation system or plumbing fixtures in your home, take advantage of the City of Ocoee Water Conservation Incentive & Rebate Program offered in conjunction with the Utilities Department's POWR program. The City wants to encourage and assist its customers with increasing the effectiveness and efficiency of their irrigation and indoor water use; which will in turn save them money and help Protect Ocoee's Water Resources.

How does it work?

Prior to making a purchase, customers who wish to upgrade any of the below-listed plumbing fixtures or irrigation system components can submit an application (specific item number and/or item description are required) to the Utilities Department for review. Once approved, customers shall purchase and install the fixtures or components and turn in all receipts/invoices to Water Conservation staff, who will then make a visible inspection of the installed items; and a check will be issued to the customer. Customers interested in obtaining any items or services provided by the City should contact the Utilities Department to check availability and make arrangements for pickup or delivery. Where applicable, installation shall occur within thirty (30) days and a visible inspection will be made or charges will be applied to your bill.

Water Conserving Fixture or Device	Maximum Rebate	Inspection Required?
